

GOOGLE CLOUD RAPID AGENT HACKATHON · FIVETRAN TRACK

RegPipeline

An autonomous compliance analyst for EU finance.

Gemini + Google Cloud Agent Builder + the real Fivetran MCP server + BigQuery.

► Live on Cloud Run

human-in-the-loop

eval 7/7 · smoke 10/10

THE PROBLEM

Compliance teams are drowning

- ▶ EU firms must track **DORA, NIS2, GDPR, the EU AI Act** — constantly.
- ▶ An analyst spends **~1.5 hours every day** scanning regulatory bulletins.
- ▶ The dangerous moment is a **threshold change** — a delegated act quietly redefines a "major incident."
- ▶ Miss it, and **last quarter's incident filings are now wrong**. Fines run to the millions.

THE SOLUTION

An agent that watches every morning

- ▶ 1 — Checks Fivetran connector health & schema changes via the Fivetran MCP
- ▶ 2 — Reads newly-synced regulatory docs from BigQuery
- ▶ 3 — Scores each one's compliance impact with **Gemini** (article · action · deadline)
- ▶ 4 — **Retroactively re-classifies** your incident history when a threshold moves
- ▶ 5 — Proposes the fix — and **waits for a human to approve**

THE DIFFERENTIATOR

**It doesn't summarize the news —
it tells you which of your past filings just became wrong.**

When DORA tightens 10%→8% / 2.0h→1.5h, a deterministic, eval-tested (7/7) engine re-runs every historical incident and returns the exact list that now counts as MAJOR.

REQUIRED TECH — INVOKED AT RUNTIME

Real, not just named

 **Gemini**

Scores impact as strict JSON · `src/agent.js`

 **Fivetran MCP**

Real @getnao/fivetran-mcp-server, spawned at runtime ·
`mcp:selftest`

 **Agent Builder**

Judged agent · `agent-builder/agent.json`

 **BigQuery**

The warehouse Fivetran syncs into · `src/bigquery.js`

No competing AI or cloud — Google + Fivetran only.

PROOF IT'S REAL

Not a slideware demo

- ▶  Live hosted URL with real data — `npm run smoke` → **10/10**
- ▶  `/health: partner_mcp_connected:true` only after a genuine MCP handshake
- ▶  Deterministic reclassification eval — **7/7**, including boundary cases
- ▶  Public · MIT · container builds & boots (verified in the Linux image)
- ▶  Human-approval gate — `POST /api/execute` returns 403 without consent

IMPACT

~333 h

analyst-hours saved / yr / entity

~€23k

recovered capacity / yr

~6 h

to surface a new reg (was days)

And the real prize: instant, defensible proof of which incidents you mis-reported the moment a threshold moves.

TRY IT

Open the live app →
click “Judge Tour”

A 60-second guided walkthrough: Health → Run → Approve → Impact → History.
